

Templates - Level 3 - Advanced

Xporter for Jira Templates are DOCX (Microsoft Word), XLSX (Microsoft Excel) or ODT (Open Office) documents formats. Along with the Xporter Academy, it is possible to specify mappings that will be replaced by the issue fields, custom fields, and other data such as comments, work logs, attachments, etc.

The Advanced level is for users with strong Xporter for Jira knowledge. It truly makes you a master of Xporter, and provides you with the powerful knowledge and skills you need to create complex templates! The level covers:

- [Exercise 1 - How to Iterate with the BREAK or CONTINUE Statement](#)
- [Exercise 2 - How to Populate the Time Tracking with Some Issues with Pivot Tables](#)
- [Exercise 3 - How to Populate Epic Links](#)
- [Exercise 4 - How to Populate a Word Template with a Table of Contents](#)
- [Exercise 5 - Project overview with pivot tables, charts and jql from Xporter Reports](#)
- [Exercise 6 - Export Charts with Word Templates](#)
- [Exercise 7 - Project overview by month \(it counts the issues by month\) using macros on an Excel](#)

We suggest that you continue the **Jira Project** that you have created on the Basic level.
