

Deprecated Mappings

There are some features that will be removed from Xporter in coming version. Take a look on table below.

Feature/Mapping/Function Name	Note	Version
Issue Detail Mapping: CreatedDate , CreatedTime and CreatedDateTime	Use Created . If you want to print only the date, you should use <code>\${dateformat("yyyy-MM-dd"):Created}</code> . If you want to print the date and time, you should use <code>\${dateformat("dd-MM-yyyy HH:mm:ss"):Created}</code> .	5.0.0
Issue Iteration level (Comments,Worklog, etc...): CreatedDate and CreatedDateTime	Use Created . If you want to print only the date, you should use <code>\${dateformat("yyyy-MM-dd"):Created}</code> . If you want to print the date and time, you should use <code>\${dateformat("dd-MM-yyyy HH:mm:ss"):Created}</code> .	5.0.0
Issue Detail Mapping: UpdatedDate , UpdatedTime and UpdatedDateTime	Use Updated . If you want to print only the date, you should use <code>\${dateformat("yyyy-MM-dd"):Updated}</code> . If you want to print the date and time, you should use <code>\${dateformat("dd-MM-yyyy HH:mm:ss"):Updated}</code> .	5.0.0
Issue Iteration level (Comments,Worklog, etc...): UpdatedDate , UpdatedTime and UpdatedDateTime	Use Updated . If you want to print only the date, you should use <code>\${dateformat("yyyy-MM-dd"):Updated}</code> . If you want to print the date and time, you should use <code>\${dateformat("dd-MM-yyyy HH:mm:ss"):Updated}</code> .	5.0.0
Issue Detail Mapping: ResolutionDate and ResolutionDateTime	Use Resolved . If you want to print only the date, you should use <code>\${dateformat("yyyy-MM-dd"):Resolved}</code> . If you want to print the date and time, you should use <code>\${dateformat("dd-MM-yyyy HH:mm:ss"):Resolved}</code> .	5.0.0
Worklog Iteration Mapping: StartDate and StartDateTime	Use Date Started . If you want to print only the date, you should use <code>\${dateformat("yyyy-MM-dd"):Date Started}</code> . If you want to print the date and time, you should use <code>\${dateformat("dd-MM-yyyy HH:mm:ss"):Date Started}</code> .	5.0.0
Issue Detail Mapping: DueDate and DueDateTime	Use Due Date . If you want to print only the date, you should use <code>\${dateformat("yyyy-MM-dd"):Due Date}</code> . If you want to print the date and time, you should use <code>\${dateformat("dd-MM-yyyy HH:mm:ss"):Due Date}</code> .	5.0.0
Issue Detail Mapping: EstimatedTime	Use Remaining Estimate	5.0.0
Worklog IterationMapping: TimeSpent	Use Time Spent	5.0.0
[Variable]	Until next version 4.3.0, the way to print the current index of an iteration is using the notation [Variable] . On version 5.0.0 this will no longer work. It will be replaced by <code>\${Variable}</code> to be consistent with our notation.	5.0.0
Html/Wiki	Currently, there are two ways to define a HTML/WIKI function: <ul style="list-style-type: none">• <code>\${Function:FieldName}</code>• <code>\${FieldName function=true}</code> Note: The second one will be removed. <code>\${Function:FieldName}</code> must be used.	5.0.0
Url	Url mapping will be unavailable on version 5.0.0. Use URL instead.	5.0.0
ProjectId	The issue project Id.	5.4.0
ProjectName	The issue project Name.	5.4.0
ProjectKey	The issue project Key.	5.4.0
ProjectComponents	The issue project Components.	5.4.0
ProjectURL	The issue project URL.	5.4.0
ProjectLead	The issue project Lead.	5.4.0
