

# Deprecated Mappings

There are some features that will be removed from Xporter in coming version. Take a look on table below.

| Feature/Mapping/Function Name                                                                                        | Note                                                                                                                                                                                                                                                                               | Version |
|----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Issue Detail Mapping: <b>CreatedDate</b> , <b>CreatedTime</b> and <b>CreatedDateTime</b>                             | Use <b>Created</b> . If you want to print only the date you should use <b>\${dateformat("yyyy-MM-dd"):Created}</b> but if you want to print the date and time you should use <b>\${dateformat("dd-MM-yyyy HH:mm:ss"):Created}</b>                                                  | 5.0.0   |
| Issue Iteration level (Comments,Worklog, etc...): <b>CreatedDate</b> and <b>CreatedDateTime</b>                      | Use <b>Created</b> . If you want to print only the date you should use <b>\${dateformat("yyyy-MM-dd"):Created}</b> but if you want to print the date and time you should use <b>\${dateformat("dd-MM-yyyy HH:mm:ss"):Created}</b>                                                  | 5.0.0   |
| Issue Detail Mapping: <b>UpdatedDate</b> , <b>UpdatedTime</b> and <b>UpdatedDateTime</b>                             | Use <b>Updated</b> . If you want to print only the date you should use <b>\${dateformat("yyyy-MM-dd"):Updated}</b> but if you want to print the date and time you should use <b>\${dateformat("dd-MM-yyyy HH:mm:ss"):Updated}</b>                                                  | 5.0.0   |
| Issue Iteration level (Comments,Worklog, etc...): <b>UpdatedDate</b> , <b>UpdatedTime</b> and <b>UpdatedDateTime</b> | Use <b>Updated</b> . If you want to print only the date you should use <b>\${dateformat("yyyy-MM-dd"):Updated}</b> but if you want to print the date and time you should use <b>\${dateformat("dd-MM-yyyy HH:mm:ss"):Updated}</b>                                                  | 5.0.0   |
| Issue Detail Mapping: <b>ResolutionDate</b> and <b>ResolutionDateTime</b>                                            | Use <b>Resolved</b> . If you want to print only the date you should use <b>\${dateformat("yyyy-MM-dd"):Resolved}</b> but if you want to print the date and time you should use <b>\${dateformat("dd-MM-yyyy HH:mm:ss"):Resolved}</b>                                               | 5.0.0   |
| Worklog Iteration Mapping: <b>StartDate</b> and <b>StartDateTime</b>                                                 | Use <b>Date Started</b> . If you want to print only the date you should use <b>\${dateformat("yyyy-MM-dd"):Date Started}</b> but if you want to print the date and time you should use <b>\${dateformat("dd-MM-yyyy HH:mm:ss"):Date Started}</b>                                   | 5.0.0   |
| Issue Detail Mapping: <b>DueDate</b> and <b>DueDateTime</b>                                                          | Use <b>Due Date</b> . If you want to print only the date you should use <b>\${dateformat("yyyy-MM-dd"):Due Date}</b> but if you want to print the date and time you should use <b>\${dateformat("dd-MM-yyyy HH:mm:ss"):Due Date}</b>                                               | 5.0.0   |
| Issue Detail Mapping: <b>EstimatedTime</b>                                                                           | Use <b>Remaining Estimate</b>                                                                                                                                                                                                                                                      | 5.0.0   |
| Worklog IterationMapping: <b>TimeSpent</b>                                                                           | Use <b>Time Spent</b>                                                                                                                                                                                                                                                              | 5.0.0   |
| <b>[Variable]</b>                                                                                                    | Until next version 4.3.0 the way to get printed the current index of an iteration is using the notation <b>[Variable]</b> . On version 5.0.0 this wont work. It will be replaced by <b>\${Variable}</b> to follow our notation.                                                    | 5.0.0   |
| <b>Html/Wiki</b>                                                                                                     | Currently there are two ways to define a HTML/WIKI function: <ul style="list-style-type: none"><li>• <b>\${Function:FieldName}</b></li><li>• <b>\${FieldName function=true}</b></li></ul> <b>Note:</b> the second one will be removed. <b>\${Function:FieldName}</b> must be used. | 5.0.0   |
| <b>Url</b>                                                                                                           | <b>Url</b> mapping will be unavailable on version 5.0.0. Use <b>URL</b> instead.                                                                                                                                                                                                   | 5.0.0   |
