XPORTER

Overview

Xporter for Jira is an app that helps you create documents using information from Jira Issues.

With Xporter, you are able to export Issue:

- Fields (Native and Custom)
- Links (Linked Issues)
- Comments
- Worklogs
- Sub-tasks
- Components
- Status Transitions
- Attached Images
- Attachments
- And even more.

You can also create awesome documents, including:

- Custom project change logs
- Custom product improvement documents
- Custom release notes in a custom format
- Requirements documents for Scrum meetings
- Letters from an issue based on a template
- Software documentation.

Generate documents from single or multiple issues.

Also, you can define workflow post-functions to generate them when a Workflow transition happens. For example, use Xporter and schedule document generation to follow your project status. Receive these documents via e-mail or send them to a File server like FTP, FTPS, SFTP or Confluence.

Xporter is available for **Jira Server** and **Cloud** versions in **English, French, German** and **Spanish**.

Feel free to [contact us](#) and we will be glad to answer your questions or even do a demo.

Discover why so many people and organizations choose Xporter for Jira every single day.
