

Single Issue

Using the Xporter Selector

When Xporter for Jira is enabled for a project, issue type, and user, the Xporter section will appear on the right side of the screen, as highlighted below. To export the issue based on a template, just select the template from the drop-down box and click the **Export** button.

The screenshot shows the Jira Software interface for a single issue. The issue title is "As a user, I'd like a historical story to show in reports". The issue is in the "DONE" status. The Xporter section is highlighted on the right, showing a dropdown menu for "Issue Detail Excel" and a search bar. The dropdown menu lists several templates: "Issue Detail Excel", "Issue Details with Cover Page", and "Issue Details with QR Code". The search bar contains the text "issu".

i You can change the document file name by turning on **Use custom file name**.

i You can include mappings in the filename, [the same mappings that are used inside the templates](#), with a slightly different notation: starting with \$ and the name of the field. Examples:

- /jira/document_\$(Key).pdf
- /jira/document_\$(Key)_\$(UpdatedDate).pdf
- /jira/document_\$(Key)_\$(UpdatedDate)_\$(Status).pdf

Using the menu option

You can export a Single Issue using the **Xporter** option in the Export menu.

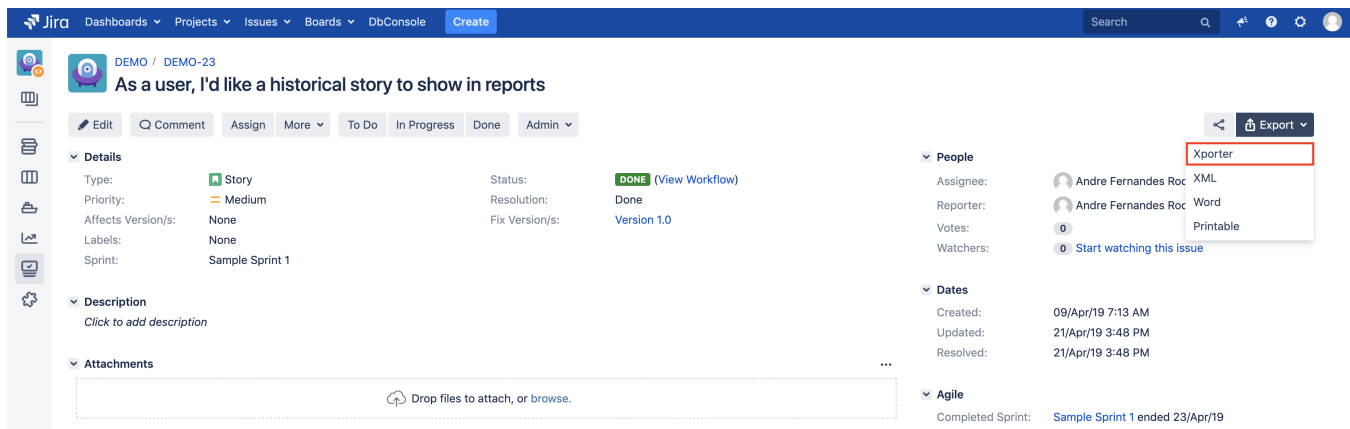

Step 1 - Enable this option on the Global Settings page (the second configuration option presented in the image below).

Global Permissions

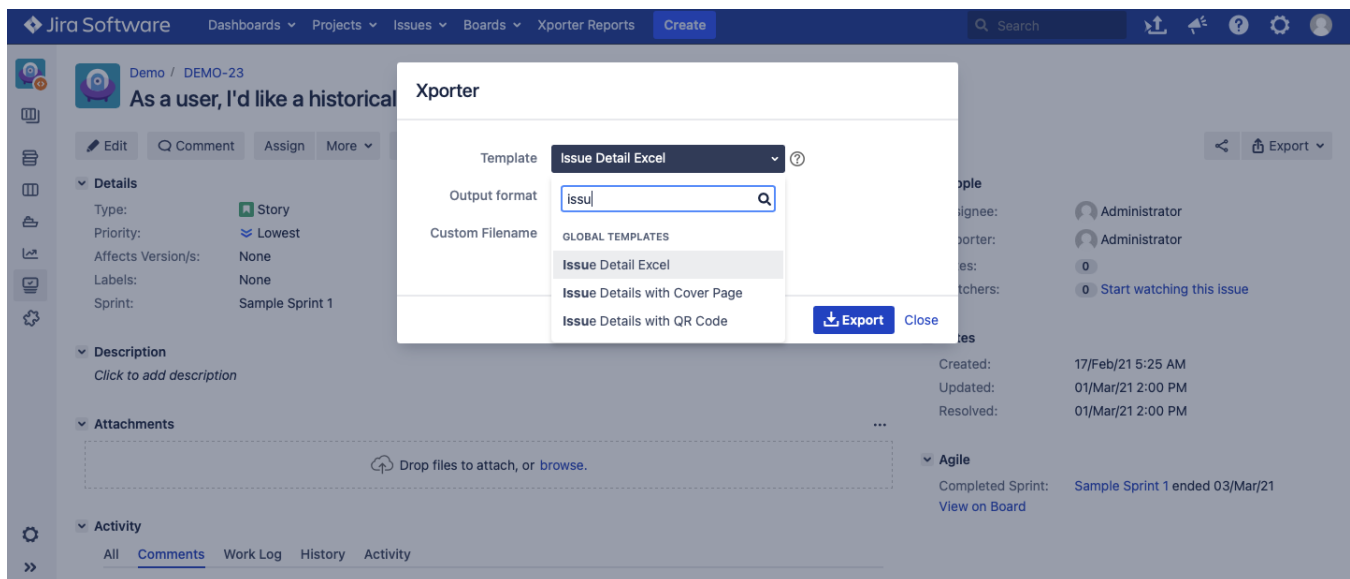

- Enable Xporter for ☐ On ☒ Off
JIRA for all projects and all users This option will override the permission scheme configuration. The add-on functionality will be available for all users and all the templates will be available for every issue.
- Enable Xporter for ☒ On ☐ Off
JIRA panel on Single Issue View This option will allow the issue to be exported from Export menu in Single Issue View.
- Allow anonymous ☐ On ☒ Off
requests This option allows unauthenticated clients to invoke the Xporter for JIRA Servlet. Use carefully, when this option is on, it can be use to export issue information without proper permissions.
- Include Attachments ☐ On ☒ Off
This option add the issue attachments to the exported document when exporting in single issue mode and the output format is set to pdf.

Save

Step 2 - From the menu, select Export, then Xporter for Jira.

Step 3 - Choose your template and the export type format. Then click **Export**.

i You can change the document file name by turning on **Use custom file name**.

i You can include mappings in the filename, [the same mappings that are used inside the templates](#), with a slightly different notation: starting with \$ and the name of the field. Examples:

- /jira/document_\$(Key).pdf
- /jira/document_\$(Key)_\${UpdatedDate}.pdf
- /jira/document_\$(Key)_\${UpdatedDate}_\${Status}.pdf

Step 4 - Wait for the operation to finish and then click on the link to download your document.
