

# Exporting Test Set

From a **Test Set**, it's possible to export the following Xray data: **Tests**.

Given that **Test Set** behaves like a regular JIRA issue, you can also export any other fields listed [here](#).

## Some general mappings we can export from a Test Set

```
Key: ${Key}
Description: ${Description}
```

## Exporting Tests from a Test Set

Below you can find an example of how to iterate over the list of **Tests** associated with a **Test Set**.

### Iterate over Tests

```
Total number of associated tests: ${TestsCount}

// Iterating each test
#{for tests}
    Key: ${Tests[n].Key}
    Test Status: ${Tests[n].TestStatus}
    // Iterating over test steps for each test
    #{for m=Tests[n].TestStepsCount}
        Action: ${Tests[n].TestSteps[m].Action}
        Data: ${Tests[n].TestSteps[m].Data}
        Expected Result: ${Tests[n].TestSteps[m].ExpectedResult}
    #{end}
#{end}

or

// Iterating each test
#{for j=TestsCount}
    Key: ${Tests[j].Key}
    Test Status: ${Tests[j].TestStatus}
    // Iterating over test steps for each test
    #{for m=Tests[j].TestStepsCount}
        Action: ${Tests[j].TestSteps[m].Action}
        Data: ${Tests[j].TestSteps[m].Data}
        Expected Result: ${Tests[j].TestSteps[m].ExpectedResult}
    #{end}
#{end}
```

For more detailed information on how to export **Tests** and its information please check the [documentation..](#)

The word document below shows an example with all the mappings available to export from a **Test Set**:
