

Exporting Precondition

From a **Precondition**, it's possible to export the following Xray data: **Tests**.

All fields listed [here](#) are available because the **Pre-condition** is a regular JIRA issue. In addition, you can export the following fields:

Some mappings we can export from a Pre-condition

```
Key: ${Key}
Summary: ${Summary}
Type: ${PreCondition.Type}
Definition: ${PreCondition.Definition}
```

Exporting Tests from a Precondition

The Xporter for Jira allows rendering all Pre-condition's Tests.

Below you can find an example of how to iterate over the list of **Tests** associated with a **Pre-condition**.

Iterate over tests

```
Total number of associated tests: ${TestsCount}

// Iterating each test
#{for tests}
    Key: ${Tests[n].Key}
    Test Status: ${Tests[n].TestStatus}
    // Iterating over test steps for each test
    #{for m=Tests[n].TestStepsCount}
        Action: ${Tests[n].TestSteps[m].Action}
        Data: ${Tests[n].TestSteps[m].Data}
        Expected Result: ${Tests[n].TestSteps[m].ExpectedResult}
    #{end}
#{end}

or

// Iterating each test
#{for j=TestsCount}
    Key: ${Tests[j].Key}
    Test Status: ${Tests[j].TestStatus}
    // Iterating over test steps for each test
    #{for m=Tests[j].TestStepsCount}
        Action: ${Tests[j].TestSteps[m].Action}
        Data: ${Tests[j].TestSteps[m].Data}
        Expected Result: ${Tests[j].TestSteps[m].ExpectedResult}
    #{end}
#{end}
```

For more detailed information on how to export **Tests** and its information please check the [documentation](#).

The word document below shows an example with all the mappings available to export from a Pre-Condition:
