

Templates - Level 2 - Intermediate

Xporter for Jira Templates are documents in DOCX (Microsoft Word), XLSX (Microsoft Excel) or ODT (Open Office) formats. Along with the Xporter Academy, it is possible to specify mappings that will be replaced by the issue fields, custom fields, and other data such as comments, work logs, attachments, etc.

The Intermediate level is for users with Xporter for Jira experience. It advances the core Xporter skills, dramatically enabling you to perform advanced functions necessary for today's business environment. The level covers:

- [Exercise 1 - How to Populate the Comments from an Issue](#)
- [Exercise 2 - How to Populate the Links of Your Issue and Print a Message When There's None](#)
- [Exercise 3 - How to Populate the JQL Queries](#)
- [Exercise 4 - How to Populate the Comments Inside JQL Queries](#)
- [Exercise 5 - How to Populate Set Functions](#)
- [Exercise 6 - How to Populate the Sum of Worklog for All Sub-Tasks](#)
- [Exercise 7 - How to Populate Details of Images](#)

We suggest that you continue the **Jira Project** that you have created on the Basic level.
